

The GROMOS Software for (Bio)Molecular Simulation

Volume 9: Index

January 9, 2021

Contents

VOLUME 1

Chapter 1. What is GROMOS	1-1
Chapter 2. The GROMOS force fields	1-3
Chapter 3. GROMOS functionalities and documentation	1-5
Chapter 4. Examples of application of GROMOS	1-7
4.1. Analysis: Calculation of dielectric permittivity and relaxation time	1-7
4.2. Simulation of polypeptide folding using a polarisable solvent	1-8
4.3. Properties of coarse-grained models for solvents: H ₂ O and co-solvents	1-9
4.4. Enhancing the configurational sampling of ions	1-9
4.5. Calculation of protein-ligand binding free enthalpies	1-9
4.6. Structure refinement based on NMR data	1-11
4.7. Water configurations and mobility in the pore of a membrane protein	1-11
4.8. Computer time required for MD simulation	1-11
Chapter 5. Limitations of GROMOS	1-17

VOLUME 2

Chapter 1. Introduction	2-1
Chapter 2. Basic choices in the definition of a molecular model	2-3
2.1. Introduction	2-3
2.2. Choice of degrees of freedom	2-4
2.3. Choice of the description of the interaction	2-5
2.4. Choice of method for configuration generation	2-6
2.5. Choice of the boundary conditions	2-8
Chapter 3. Scope of the GROMOS package	2-9
3.1. Introduction	2-9
3.2. Choice of the degrees of freedom	2-9
3.3. Choice of the description of the interaction	2-9
3.3.1. Charge groups, searching neighbours	2-10
3.3.2. Twin-range method for long-range interactions	2-11
3.3.3. Pairlist construction	2-11
3.4. Choice of the method for the configuration generation	2-12
3.5. Choice of the boundary conditions	2-12
Chapter 4. Spatial boundary conditions	2-13
4.1. Introduction	2-13
4.2. Vacuum boundary conditions (VBC)	2-13
4.3. Fixed boundary conditions (FBC)	2-14
4.4. Periodic boundary conditions (PBC)	2-15
4.4.1. Triclinic computational box under PBC	2-16

4.4.2.	Special periodic boundary conditions	2-21
4.4.3.	Multiple unit-cell simulations under PBC	2-22
4.4.4.	Rectangular-brickwall box	2-23
Chapter 5.	Bonded interaction force-field terms	2-25
5.1.	Bond stretching force-field term	2-25
5.2.	Bond-angle bending force-field term	2-26
5.3.	Improper dihedral-angle bending force-field term	2-26
5.4.	Proper dihedral-angle torsion force-field term	2-27
Chapter 6.	van der Waals interactions	2-31
6.1.	Introduction	2-31
6.2.	Excluded neighbours	2-31
6.3.	Normal van der Waals interactions	2-31
6.4.	Third-neighbour van der Waals interaction	2-32
6.5.	Soft-core interactions	2-33
Chapter 7.	Electrostatic interactions	2-35
7.1.	Introduction	2-35
7.2.	Common features	2-35
7.3.	Reaction-field (RF) interactions	2-36
7.4.	Lattice-sum (LS) interactions	2-36
7.4.1.	Introduction	2-36
7.4.2.	Real-space interactions in LS electrostatics	2-44
7.4.3.	Ewald reciprocal-space interactions in LS electrostatics	2-44
7.4.4.	PPPM reciprocal-space interactions in LS electrostatics	2-46
7.5.	Polarization	2-55
7.5.1.	Introduction	2-55
7.5.2.	Theory	2-56
7.5.3.	Off-atom sites	2-58
7.5.4.	Non-linear polarizability	2-59
Chapter 8.	Coarse-grained models and multi-resolution simulation	2-61
8.1.	Introduction	2-61
8.2.	Multi-resolution simulation	2-64
Chapter 9.	Special force-field terms	2-65
9.1.	Introduction	2-65
9.2.	Atom-position restraining or fixed atoms	2-65
9.3.	Distance restraining	2-66
9.4.	Virtual and pseudo atoms	2-70
9.4.1.	CH1-group (aliphatic)	2-72
9.4.2.	CH1-group (aromatic)	2-72
9.4.3.	CH2-group (two virtual protons)	2-73
9.4.4.	CH2-groups (one pseudo site)	2-74
9.4.5.	CH3-group (one pseudo site)	2-74
9.4.6.	Two CH3-groups (one pseudo site)	2-74
9.4.7.	Three CH3-groups (one pseudo site)	2-74
9.4.8.	Center of geometry (one pseudo site)	2-75
9.4.9.	Center of mass (one pseudo site)	2-75
9.5.	Bond-angle restraining	2-75
9.6.	Dihedral-angle restraining	2-75
9.7.	3J -coupling constant restraining	2-76
9.8.	S^2 -order parameter restraining	2-82
9.9.	X-ray structure factor amplitude restraining	2-84
9.10.	X-ray electron density restraining	2-85
9.11.	X-ray crystallographic symmetry restraining	2-85
9.12.	Distance-field distance restraining	2-86

9.13.	Biasing energy functions	2-88
9.13.1.	Local elevation biasing	2-88
9.13.2.	Umbrella sampling	2-89
9.13.3.	Local elevation umbrella sampling (LEUS)	2-89
9.13.4.	Ball and stick LEUS	2-90
Chapter 10.	Constraints	2-95
10.1.	Introduction	2-95
10.2.	Position Constraints	2-96
10.3.	Constraints using the SHAKE method and its derivatives	2-96
10.3.1.	Constraints using the SHAKE method	2-96
10.3.2.	Constraints using the SETTLE method	2-99
10.3.3.	Constraints using the LINCS method	2-100
10.3.4.	Constraints using the M-SHAKE method	2-101
10.3.5.	Constraints using the FLEXSHAKE method	2-102
10.3.6.	Constrained positions	2-102
10.3.7.	Constrained velocities	2-102
10.3.8.	Constrained forces	2-103
10.4.	Bond-length constraints in the solute	2-103
10.5.	Bond-length and bond-angle constraints in solvent	2-104
10.6.	Dihedral-angle constraints	2-104
10.7.	Translational and rotational constraints	2-107
Chapter 11.	Energy Minimization	2-111
11.1.	Introduction	2-111
11.2.	Steepest-descent minimization	2-112
11.3.	Conjugate-gradient minimization	2-112
11.4.	Steepest-descent minimization with constraints (SHAKE)	2-114
11.5.	Conjugate-gradients minimization with constraints (SHAKE)	2-115
Chapter 12.	Molecular Dynamics	2-119
12.1.	Introduction	2-119
12.2.	Temperature scaling	2-120
12.2.1.	Temperature calculation in MD++	2-120
12.2.2.	Thermostat algorithms in MD++	2-121
12.2.3.	Use of temperature groups, sets of degrees of freedom and thermostats	2-124
12.3.	Number of degrees of freedom	2-125
12.4.	Calculation of the virial	2-126
12.5.	Pressure scaling	2-128
12.6.	MD algorithms	2-130
12.7.	Initialization, equilibration and sampling	2-131
Chapter 13.	Stochastic Dynamics	2-137
13.1.	Introduction	2-137
13.2.	Leap-frog SD algorithm	2-137
13.3.	Choice of atomic friction coefficient	2-141
Chapter 14.	Free Energy Determination	2-143
14.1.	Introduction	2-143
14.2.	Parameterization of the Hamiltonian	2-144
14.2.1.	Covalent bond forces	2-145
14.2.2.	Covalent bond forces (soft potential energy function)	2-147
14.2.3.	Covalent bond-angle forces	2-148
14.2.4.	Covalent bond-angle forces (soft potential energy function)	2-151
14.2.5.	Improper dihedral-angle forces	2-151
14.2.6.	Improper dihedral-angle forces (soft potential energy function)	2-153
14.2.7.	Dihedral-angle torsion forces	2-154
14.2.8.	Non-bonded forces	2-156

14.2.9. Polarization	2-158
14.2.10. Perturbed atom-atom distance restraints	2-161
14.2.11. Perturbed dihedral angle restraints	2-164
14.2.12. Perturbed distance-field distance restraints	2-165
14.3. Constraints	2-166
14.4. Assigning different λ -dependences for specific groups of atoms	2-167
14.5. Choice of pathway and states A and B	2-170
14.6. Thermodynamic integration	2-172
14.7. Thermodynamic perturbation and extrapolation	2-173
14.8. Umbrella sampling	2-174
14.9. Enveloping Distribution Sampling	2-176
14.9.1. EDS with smoothness parameter s	2-176
14.9.2. Accelerated EDS	2-178
14.9.3. Twin-system EDS	2-180
14.9.4. Configurational EDS	2-181
Chapter 15. QM/MM simulation	2-185
15.1. Introduction	2-185
15.2. Hamiltonian	2-185
15.3. Initialization, simulation and analysis	2-187
Chapter 16. Replica Exchange (RE) Molecular Dynamics	2-189
16.1. Introduction	2-189
16.2. Temperature replica exchange MD	2-190
16.2.1. Simulation checks	2-191
16.2.2. Factors determining the efficiency	2-192
16.3. Hamiltonian replica exchange MD	2-192
16.4. Initialization, simulation and analysis	2-192
16.4.1. Set up of a RE simulation	2-192
16.4.2. Analysis of a RE trajectory	2-193
Chapter 17. Derivatives of the force-field terms	2-195
17.1. Bond stretching force-field term	2-195
17.2. Bond-angle bending force-field term	2-195
17.3. Improper dihedral-angle bending force-field term	2-196
17.4. Proper dihedral-angle torsion force-field term	2-196
17.5. LJ interaction terms	2-197
17.6. Electrostatic interaction terms: Coulomb plus reactive field	2-197
17.7. Electrostatic interaction terms: lattice sum	2-197
Chapter 18. Appendices	2-199
18.1. Conversion of force constants: bond-stretching and bond-angle bending interactions	2-199

VOLUME 3

Chapter 1. Introduction	3-1
1.1. GROMOS force fields	3-1
1.2. Development of the GROMOS force field	3-2
Chapter 2. Physical forces: GROMOS force field	3-5
2.1. Introduction	3-5
2.2. Bond stretching force-field terms	3-5
2.3. Bond-angle bending force-field terms	3-6
2.4. Improper dihedral-angle bending force-field term	3-6
2.5. Proper dihedral-angle torsion force-field term	3-7
2.6. Non-bonded interactions	3-9
2.6.1. van der Waals parameters	3-9

2.6.2. Atomic charges and charge groups	3-10
Chapter 3. GROMOS interaction function parameters	3-13
Chapter 4. GROMOS molecular topology building blocks	3-55
4.1. Introduction	3-55
4.2. Definition of molecular topology building block pictures	3-67
4.3. α -amino acids and analogues	3-67
4.4. β -amino acids	3-199
4.5. Nucleotides	3-344
4.6. Carbohydrates	3-429
4.7. Other molecules	3-481
Chapter 5. GROMOS standard configurations	3-529
5.1. Water	3-529
5.2. Chloroform	3-529
5.3. DMSO	3-529
5.4. Methanol	3-529
5.5. Carbontetrachloride	3-529

VOLUME 4

Chapter 1. Introduction	4-1
Chapter 2. Block structure and title record of GROMOS files	4-3
Chapter 3. Topological information	4-5
3.1. Introduction	4-5
3.2. Molecular topology	4-6
3.3. Perturbation molecular topology	4-16
3.4. Atom-atom and distance-field distance restraints	4-23
3.5. Dihedral-angle restraints or constraints	4-27
3.6. 3J -coupling constant restraints	4-28
3.7. S^2 -order parameter restraining	4-29
3.8. Local-elevation coordinates	4-31
3.9. Local elevation umbrella sampling database file	4-32
3.10. Atomic friction coefficients	4-32
3.11. Position restraining or constraining atom specification list	4-33
3.12. B-factor restraining	4-33
3.13. Backwards compatibility with GROMOS96	4-34
Chapter 4. Configurational information	4-37
4.1. Introduction	4-37
4.2. Atomic coordinates	4-38
4.3. Atomic velocities	4-39
4.4. Atomic forces	4-40
4.5. Atomic stochastic integrals	4-40
4.6. Periodic box	4-41
4.7. Nose-Hoover chain thermostat variables	4-42
4.8. Roto-translational constraints reference variables	4-42
4.9. Perturbation data	4-42
4.10. Atom-atom distance restraints	4-43
4.11. 3J -coupling constant restraints	4-43
4.12. S^2 -order parameter restraints	4-44
4.13. Crystallographic restraints	4-45
4.14. Local-elevation data	4-45
4.15. Ball and stick local-elevation data	4-46
4.16. Time or step number data	4-49

4.17.	Energies, pressure, volume and free-energy data	4-49
4.18.	Atomic B-factors and positional fluctuations	4-54
4.19.	Accelerated EDS parameter search data	4-55
4.20.	Backwards compatibility with GROMOS96	4-56
Chapter 5.	Molecular topology building blocks	4-57
5.1.	Introduction	4-57
5.2.	Separate molecules	4-57
5.3.	Linking of building blocks	4-65
5.4.	Other building blocks	4-66
5.5.	End groups	4-67
5.6.	Contents of the MTB file	4-67
Chapter 6.	Interaction function parameters	4-69
6.1.	Introduction	4-69
6.2.	Mass atom types	4-69
6.3.	Covalent bond-stretching interaction parameters	4-70
6.4.	Covalent bond-angle bending interaction parameters	4-70
6.5.	Improper dihedral-angle interaction parameters	4-70
6.6.	Dihedral-angle torsional interaction parameters	4-71
6.7.	Van der Waals interaction parameters and integer atom codes	4-71
6.8.	Atomic charges and charge group codes	4-73
6.9.	Excluded neighbours	4-73
6.10.	Contents of the IFP file	4-73
Chapter 7.	Library files for GROMOS++	4-75
7.1.	Introduction	4-75
7.2.	Interaction function parameter renumbering	4-75
7.3.	Atomic naming conventions	4-76
7.4.	Definition of file-names and joblists	4-77
7.5.	Energy trajectory block definition	4-79
7.6.	Hydrogen-bond donors and acceptors	4-79
7.7.	Crystallographic transformations	4-80
7.8.	NOE analysis	4-81
7.9.	SASA implicit solvent model	4-83
7.10.	DISICL angle, region and segment definitions	4-84
Chapter 8.	Input file for MD++	4-87
Chapter 9.	Output files for MD++	4-107
Chapter 10.	Files accessed by MD++ for reading or writing	4-109
Chapter 11.	Other non-GROMOS formats	4-115
Chapter 12.	List of GROMOS blocknames	4-117
Chapter 13.	Recommendations for standard input and output file names	4-121

VOLUME 5

Chapter 1.	Introduction	5-1
1.1.	Nomenclature of GROMOS files	5-1
1.2.	Common arguments in GROMOS++	5-1
1.3.	Atom, property and vector specifiers in GROMOS++	5-2
1.3.1.	Atom specifiers	5-2
1.3.2.	Vector specifiers	5-4
1.3.3.	Property specifiers	5-4

Chapter 2. Setup of simulations (preprocessing)	5-7
2.1. <code>bin_box</code> (GROMOS++ program)	5-7
2.2. <code>build_box</code> (GROMOS++ program)	5-8
2.3. <code>check_box</code> (GROMOS++ program)	5-9
2.4. <code>check_top</code> (GROMOS++ program)	5-10
2.5. <code>com_top</code> (GROMOS++ program)	5-12
2.6. <code>con_top</code> (GROMOS++ program)	5-13
2.7. <code>copy_box</code> (GROMOS++ program)	5-14
2.8. <code>cry</code> (GROMOS++ program)	5-15
2.9. <code>duplicate</code> (GROMOS++ program)	5-16
2.10. <code>explode</code> (GROMOS++ program)	5-17
2.11. <code>gca</code> (GROMOS++ program)	5-18
2.12. <code>gch</code> (GROMOS++ program)	5-19
2.13. <code>ion</code> (GROMOS++ program)	5-21
2.14. <code>link_top</code> (GROMOS++ program)	5-22
2.15. <code>make_pt_top</code> (GROMOS++ program)	5-24
2.16. <code>make_sasa_top</code> (GROMOS++ program)	5-25
2.17. <code>make_top</code> (GROMOS++ program)	5-26
2.18. <code>mk_script</code> (GROMOS++ program)	5-27
2.19. <code>pdb2g96</code> (GROMOS++ program)	5-29
2.20. <code>pert_top</code> (GROMOS++ program)	5-30
2.21. <code>prep_eds</code> (GROMOS++ program)	5-31
2.22. <code>prep_xray</code> (GROMOS++ program)	5-32
2.23. <code>prep_xray_le</code> (GROMOS++ program)	5-33
2.24. <code>pt_top</code> (GROMOS++ program)	5-34
2.25. <code>ran_box</code> (GROMOS++ program)	5-35
2.26. <code>ran_solvation</code> (GROMOS++ program)	5-36
2.27. <code>red_top</code> (GROMOS++ program)	5-37
2.28. <code>sim_box</code> (GROMOS++ program)	5-38
Chapter 3. Minimizers and simulators	5-39
3.1. <code>md</code> (MD++ program)	5-40
3.2. <code>repex_mpi</code> (MD++ program)	5-41
3.3. <code>eds_2box</code> (MD++ program)	5-42
Chapter 4. Analysis of trajectories (postprocessing)	5-43
4.1. <code>bar</code> (GROMOS++ program)	5-43
4.2. <code>bilayer_dist</code> (GROMOS++ program)	5-45
4.3. <code>bilayer_oparam</code> (GROMOS++ program)	5-46
4.4. <code>cluster</code> (GROMOS++ program)	5-47
4.5. <code>cog</code> (GROMOS++ program)	5-48
4.6. <code>cos_dipole</code> (GROMOS++ program)	5-49
4.7. <code>cos_epsilon</code> (GROMOS++ program)	5-50
4.8. <code>cry_rms</code> (GROMOS++ program)	5-51
4.9. <code>dfgrid</code> (GROMOS++ program)	5-52
4.10. <code>dfmult</code> (GROMOS++ program)	5-54
4.11. <code>disicl</code> (GROMOS++ program)	5-55
4.12. <code>dg_ener</code> (GROMOS++ program)	5-56
4.13. <code>dGslv_pbsolv</code> (GROMOS++ program)	5-57
4.14. <code>diffus</code> (GROMOS++ program)	5-59
4.15. <code>dipole</code> (GROMOS++ program)	5-60
4.16. <code>ditrans</code> (GROMOS++ program)	5-61
4.17. <code>dssp</code> (GROMOS++ program)	5-62
4.18. <code>eds_update_1</code> (GROMOS++ program)	5-63
4.19. <code>eds_update_2</code> (GROMOS++ program)	5-64
4.20. <code>edyn</code> (GROMOS++ program)	5-65
4.21. <code>ene_ana</code> (GROMOS++ program)	5-66

4.22.	ener (GROMOS++ program)	5-67
4.23.	epath (GROMOS++ program)	5-69
4.24.	eps_field (GROMOS++ program)	5-70
4.25.	epsilon (GROMOS++ program)	5-71
4.26.	espmmap (GROMOS++ program)	5-73
4.27.	ext_ti_ana (GROMOS++ program)	5-74
4.28.	ext_ti_merge (GROMOS++ program)	5-77
4.29.	filter (GROMOS++ program)	5-78
4.30.	follow (GROMOS++ program)	5-79
4.31.	gathtraj (GROMOS++ program)	5-80
4.32.	hbond (GROMOS++ program)	5-81
4.33.	int_ener (GROMOS++ program)	5-82
4.34.	iondens (GROMOS++ program)	5-83

4.65.	visco (GROMOS++ program)	5-115
4.66.	xrayts (GROMOS++ program)	5-116
Chapter 5. Miscellaneous		5-117
5.1.	atominfo (GROMOS++ program)	5-117
5.2.	close_pair (GROMOS++ program)	5-118
5.3.	frameout (GROMOS++ program)	5-119
5.4.	inbox (GROMOS++ program)	5-120
5.5.	pairlist (GROMOS++ program)	5-121
5.6.	shake_analysis (GROMOS++ program)	5-122
5.7.	unify_box (GROMOS++ program)	5-123
5.8.	rot_rel (GROMOS++ program)	5-124
5.9.	VMD plugin (GROMOS++ program)	5-125

5.10. <code>xray_map</code> (GROMOS++ program)	5-126
--	-------

VOLUME 6

Chapter 1. Outline of the GROMOS Code	6-1
1.1. MD++ outline	6-1
1.1.1. Efficiency	6-2
1.1.2. Debugging information	6-3
1.1.3. In-code documentation	6-3
1.2. GROMOS++ outline	6-4
1.2.1. GROMOS++ source code and in-code documentation	6-5
Chapter 2. Error Messages	6-7
Chapter 3. Machine Compatibility	6-9
Chapter 4. Numerical and Mathematical Functions	6-11
4.1. Numerical functions	6-11
4.2. Mathematical functions	6-11
4.2.1. MD++	6-11
4.2.2. GROMOS++	6-12
Chapter 5. Nomenclature	6-15
Chapter 6. Units	6-17
Chapter 7. Charge Group Codes	6-21
Chapter 8. Pair List Generation	6-23
8.1. Double loop pair list	6-23
8.2. Grid pair list (Heinz and Hünenberger)	6-23
8.3. Grid pair list with expanded coordinates	6-23
Chapter 9. Boundary Conditions and Periodicity	6-25
Chapter 10. Generation of Cartesian Coordinates from Internal Coordinates	6-31
Chapter 11. Generation of Hydrogen Atom Coordinates	6-33
Chapter 12. Generation of Atomic Velocities	6-39
Chapter 13. What to Do when SHAKE Fails	6-41
Chapter 14. Removal of Centre of Mass Motion	6-43
Chapter 15. Saving Trajectories	6-45
Chapter 16. Performing a Translational Superposition and a Rotational Least-Squares Fit	6-47
Chapter 17. Transformation between Coordinates	6-49
17.1. Cartesian and Oblique Contravariant Crystallographic Coordinates	6-49
Chapter 18. Distributions, Averages and Root-Mean-Square Fluctuations	6-53
Chapter 19. Dihedral-Angle Conventions, Names and Transitions	6-55
Chapter 20. Definition of Hydrogen Bonds	6-59
Chapter 21. Time Correlation Functions and Spectral Densities	6-61
21.1. Use of fast Fourier transform (FFT) routines in GROMOS	6-62
Chapter 22. Coarse Graining in GROMOS	6-63

Chapter 23. Parallelisation in GROMOS	6-65
23.1. Parallelisation in MD++	6-65
23.2. Parallelisation in GROMOS++	6-65
Chapter 24. Fast Solvent Interaction Function Evaluation	6-67
24.1. Solvent innerloops in MD++	6-67
Chapter 25. Replica Exchange Simulation	6-69

VOLUME 7

Chapter 1. Introduction	7-1
1.1. Simulation using GROMOS	7-1
1.1.1. Units	7-1
1.1.2. File and software organisation	7-1
1.1.3. Summary of the exercise	7-2
1.1.4. Calling the GROMOS programs	7-3
1.2. Practical information	7-3
Chapter 2. A practical exercise	7-5
2.1. Building a topology	7-5
2.1.1. Creating the topology for the penta-peptide	7-5
2.2. Generating atom Cartesian coordinates for the solute, solvent and counter ions	7-7
2.2.1. Generating atomic Cartesian coordinates for the linear charged penta-peptide	7-7
2.2.2. Energy minimisation of the penta-peptide	7-8
2.2.3. Solvating the penta-peptide in a water box	7-10
2.2.4. Adding counter ions to the simulation box	7-12
2.3. Set-up and production simulation of the penta-peptide	7-13
2.3.1. Thermalisation and equilibration	7-13
2.3.2. Molecular dynamics sampling simulation	7-17
2.4. Analysis of the penta-peptide trajectories	7-19
2.4.1. Analysis of the energy trajectory	7-19
2.4.2. Analysis of the coordinate trajectory	7-22
2.5. Enhancing sampling using Local Elevation	7-35
2.6. Free energy calculations	7-38
2.6.1. Thermodynamic integration	7-38
2.6.2. Enveloping distribution sampling	7-40
2.7. Constructing a new building block	7-43

VOLUME 8

Chapter 1. System requirements	8-1
Chapter 2. Installation of required libraries	8-3
2.1. GNU scientific library	8-3
2.1.1. Installation from source	8-3
2.2. FFTW 3	8-3
2.2.1. Installation from source	8-4
Chapter 3. Installation of GROMOS	8-5
3.1. Installing MD++	8-5
3.1.1. Debug version of MD++	8-5
3.1.2. Parallel version of MD++	8-6
3.1.3. Compiling MD++ using the CUDA solvent-solvent interaction evaluation acceleration	8-6
3.1.4. What is installed	8-6
3.2. Installing GROMOS++	8-6
3.2.1. Generating the documentation	8-7

3.2.2. Adding it to the path	8-7
3.2.3. What is installed	8-7
